# Parker Labs Signa Spray Electrode Solution, 2-oz

HCPCS:

• The Parker Labs Signa Spray Electrode Solution preps the skin prior to attaching electrodes to maximize their effectiveness and prolong electrode life.
• It is a non-gritty solution that is ideal for use with muscle stimulation equipment and conductive garments, but not recommended for defibrillation.
• Preps the skin to maximize conductivity of electrodes
• Rehydrates self-adhesive electrodes and prolongs electrode life
• Easy to apply and clean; non-gritty with no residue build-up
• Bacteriostatic and hypoallergenic; will not irritate skin
• Will not stain clothes or equipment
• 2-oz size; also available in 8.5-oz size
• Not recommended for defibrillation
• Proudly made in the USA
